

## ABSTRACT

### DATA SAMPLING WITH PRIORITY TO CONFORMING COMPONENT RATIOS

5           A component ratio is received for a plurality of attributes associated with a composition condition. An extractable amount of data for each attribute is determined; and a target extraction amount for each attribute is calculated based, at least partially, on the component ratio. If a target extraction amount corresponding to a given attribute exceeds an extractable amount corresponding to the same given attribute, then the target extraction  
10           amount is adjusted to a value that is equal to or less than the corresponding extractable amount while retaining the component ratio within a predetermined range.
